

Daily ad report: Hawaii House Sale + Test - Hawaii House Sale

Report date Oct 8, 2026 (data Oct 2, 2026 to Oct 8, 2026, America/Los_Angeles; today's figures run to 7 PM). Extracted Oct 8, 7:30 PM PDT for Kaloli Point Residence (15-1077 Amau Rd). Sources: Meta ok, GA4 ok, Website ok, Leads ok.

Executive summary

- **In one line:** The ads bring cheap, real visits (\$0.07 per landing page view, CTR 5.9%); no tour requests yet, which is still normal at this volume; first fix: give US its own ad set with most of the budget, and the other countries a separate, smaller one (or remove them).
- **Results: \$12.65 spent** for 3,041 impressions, 179 link clicks (CTR 5.9%), 171 landing page views (\$0.07 each) and **0 tour requests** with ad tags; other real requests in the window: 1 from Facebook/Instagram without ad tags, 1 internal.
- **UGC video: Traffic strong, leads too early.** CTR 6.5%; \$0.07 per landing page view; 0 requests from 87 page views (65% likely by chance); 21% of GA4 visits engaged.
- **Maximus video: Traffic strong, leads too early.** CTR 5.3%; \$0.08 per landing page view; 0 requests from 84 page views (66% likely by chance); 14% of GA4 visits engaged.
- **Which ad is ahead:** Maximus video beats UGC video on clicks that load the page (99% vs 93%, $p = 0.04$); other differences are still within chance. Best value so far: UGC video at \$0.88 per engaged visit vs \$1.64 for Maximus video (GA4 split partly estimated; not significant yet, $p = 0.45$). Meta's own A/B test (Test in progress, Oct 8, 2026, 12:00 AM – Oct 14, 2026, 12:00 AM) judges on cost per post engagement: A Hawaii House Sale \$0.03, B Test - Hawaii House Sale \$0.02.
- **Day over day:** 0 complete days of delivery so far; the ads started today: tomorrow compares today with yesterday up to the same hour, and full days are compared from the day after.
- **Biggest issue:** UGC video: only 9% of spend reached US; Maximus video: only 7% of spend reached US.
- **Do next:** (1) Give US its own ad set with most of the budget, and the other countries a separate, smaller one (or remove them). (2) Give both campaigns the same daily budget for every test day: add the same budget schedule to the other campaign, or remove the schedule until the test ends (Campaign > Budget > Budget scheduling). (3) Make the first screen continue the ad: same opening scene, price and location in large type, tour button visible; consider showing the photo strip in the first screen.
- **Data checks:** 21 pass, 0 warn, 0 fail. GA4 per-campaign numbers settle 24–48 hours after the visit.

Recommendations

Ranked by expected value and ease. Each change shows the evidence in this report, the guidance it follows (linked) and what the next report should show if it worked.

1. UGC video: only 9% of spend reached US; Maximus video: only 7% of spend reached US

- **Do:** Give US its own ad set with most of the budget, and the other countries a separate, smaller one (or remove them).
- **Where:** Ads (UGC video, Maximus video); effort easy, impact high.
- **Evidence:** UGC video: CA 78% of spend, CPM \$4.50, CTR 5.8%; JP 13% of spend, CPM \$2.95, CTR 6.5%; US 9% of spend, CPM \$9.55, CTR 21.7%; Maximus video: CA 74% of spend, CPM \$3.95, CTR 4.6%; JP 19% of spend, CPM \$3.40, CTR 6.7%; US 7% of spend, CPM \$8.96, CTR 12.0%. Meta buys the cheapest landing page views, and impressions in the priority market cost more (see CPM), so most of the budget goes elsewhere.
- **Best practice:** Within its locations Meta chases the cheapest results, so a cheaper market crowds out the one you care about; a separate ad set and budget per market is the lever that guarantees a share. With the Housing category, narrowing tools (age, gender, ZIP) are unavailable, so location and budget are the main controls. Keep it to few ad sets so each still gets enough results to learn. [Meta: Use location targeting](#); [Meta: How to choose a Special Ad Category](#); [Meta: About the learning phase](#)
- **Expect:** The priority market gets the budget you assign to it, at a higher but more relevant cost per page view. **Check next report:** Priority-market share of spend reaches the target on the next full day.

2. The A/B test arms will not have the same budget on 2 test days

- **Do:** Give both campaigns the same daily budget for every test day: add the same budget schedule to the other campaign, or remove the schedule until the test ends (Campaign > Budget > Budget scheduling).
- **Where:** Ads; effort easy, impact high.
- **Evidence:** Oct 9: UGC video \$10.00 vs Maximus video \$15.00; Oct 10: UGC video \$10.00 vs Maximus video \$15.00 (scheduled: Maximus video \$15.00/day for Oct 9 – Oct 10). With a larger budget one arm buys more, and more expensive, impressions, so the comparison is no longer like for like; a 50% budget jump can also restart the learning phase.
- **Best practice:** Meta recommends the same budget for both versions of a test for a fair comparison; a large budget change can also send ad sets back into learning. [Meta: About A/B testing](#); [Meta: Significant edits and the learning phase](#)

- **Expect:** Like-for-like arms, so the cheaper cost per result reflects the creative. **Check next report:** Equal daily budgets on every remaining test day.

3. 45% of Facebook/Instagram visitors leave before reaching the gallery

- **Do:** Make the first screen continue the ad: same opening scene, price and location in large type, tour button visible; consider showing the photo strip in the first screen.
- **Where:** Website; effort medium, impact high.
- **Evidence:** 68 of 152 in-app visits never loaded an image below the first screen; 84 scrolled on (gallery 26, film 31, levels 17, map 10). In the in-app browser people decide in a second or two; if the first screen does not continue what the video showed (the view, the price, the place), they close it.
- **Best practice:** Landing page experience - relevance to the ad and ease of use on mobile - decides whether visitors stay; continue the ad's story on the first screen and keep it fast (LCP within 2.5 s). [Google Ads: Quality Score and landing page experience](#); [web.dev: Web Vitals \(LCP, INP, CLS thresholds\)](#)
- **Expect:** More in-app visitors scroll past the first screen. **Check next report:** Share of in-app visits that scroll past the first screen, day over day.

4. 11 ad visitors started the tour form, 0 sent it

- **Do:** Require only a name and one contact method; make date and time optional with "flexible" pre-selected (form and API validation).
- **Where:** Website; effort medium, impact high.
- **Evidence:** form starts (GA4): UGC video 5, Maximus video 4; 20 in-app visitors reached or opened the form and 1 sent it (without ad tags) (website); if 30% of starters normally finish, 0 of 11 has a 2% chance. Starting but not sending points at the form itself: five required fields (name, phone, email, date, time) and date pickers are a lot on a phone.
- **Best practice:** Keep forms short: every field removed raises completion; make the rest optional and label it, with at most one or two optional fields. [Nielsen Norman Group: Website forms usability, top 10 recommendations](#)
- **Expect:** More form starters send the request. **Check next report:** Form starts vs requests sent.

5. The A/B test picks its winner on "Cost per post engagement"

- **Do:** Judge the ads in this report (cost per engaged visit, tour-button clicks). For the next test choose "Cost per landing page view" or "Cost per lead" as key metric.
- **Where:** Ads; effort easy, impact medium.
- **Evidence:** Test in progress (Oct 8, 2026, 12:00 AM – Oct 14, 2026, 12:00 AM); A Hawaii House Sale: \$0.03, B Test - Hawaii House Sale: \$0.02. Post engagement rewards the video people like or replay, not the one that sends buyers to the site.
- **Best practice:** Meta picks the A/B winner on the cost per result of the key metric chosen at setup; choose the metric that matches the business goal (cost per landing page view now, cost per lead later). [Meta: How winning campaigns are determined in A/B tests](#); [Meta: Best practices for A/B testing](#)
- **Expect:** A winner that predicts website visits and tour requests, not likes. **Check next report:** The next test's key metric.

6. The A/B test runs 6 days, under Meta's 7-day minimum

- **Do:** Treat this test's result as directional and schedule the next test for 7+ days. To extend this one, Experiments > the test > Edit schedule, ending Oct 15 or later (Meta notes schedule changes affect the reliability of results so far).
- **Where:** Ads; effort easy, impact medium.
- **Evidence:** Test schedule Oct 8, 2026, 12:00 AM – Oct 14, 2026, 12:00 AM; Test in progress. Tests shorter than 7 days miss weekday/weekend differences and often end without a confident winner.
- **Best practice:** Meta recommends A/B tests of at least 7 days (30 at most); shorter tests may be inconclusive. Schedule changes are possible but affect the reliability of results collected so far. [Meta: Best practices for A/B testing](#); [Meta: Edit or cancel your A/B test](#)
- **Expect:** A full week of data, including a weekend, behind the decision. **Check next report:** Test schedule of 7+ days.

More changes to consider

#	Change	Where	Why	Effort	Impact
7	URL parameters: utm_source=meta&utm_medium=paid_social&utm_campaign={{campaign.name}}&utm_content={{ad.name}} (then add the campaign to campaigns.local.json only for a friendly label).	Tracking	Use dynamic UTM values so every new ad is tracked automatically	easy	medium
8	Keep Traffic while requests are rare. After the first 10–20 requests, test a Leads campaign optimised for the website Lead event (the pixel already fires it on submit).	Ads	Campaigns optimise for landing page views, not tour requests	medium	medium

Conversion by campaign

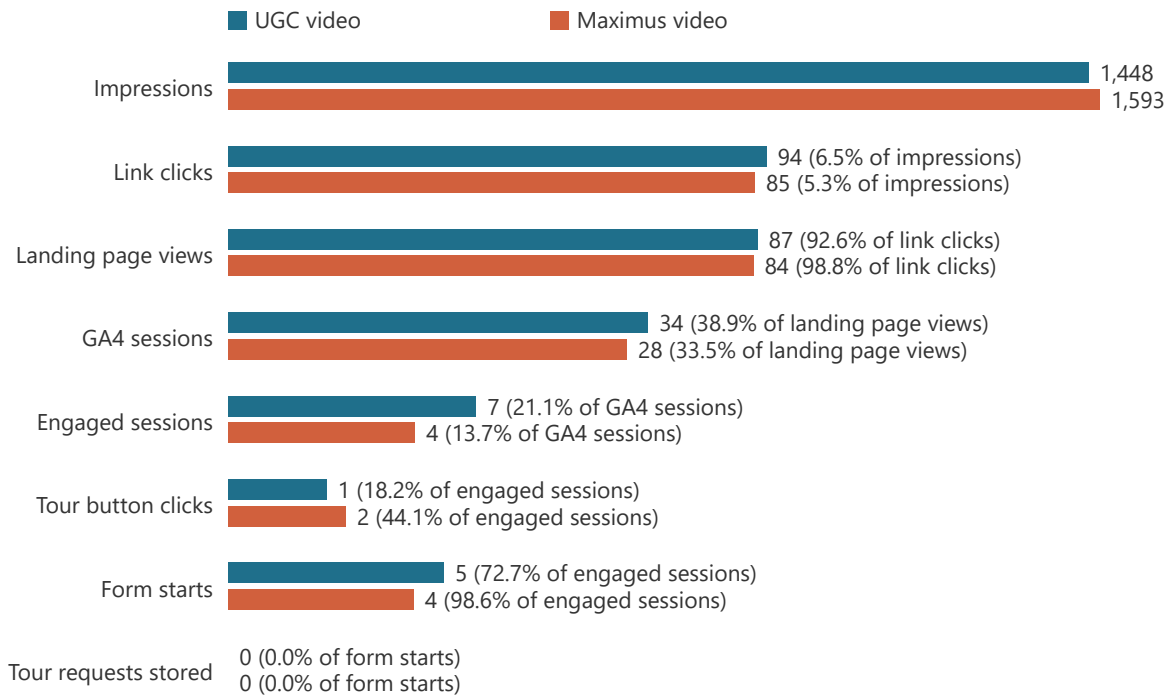

Campaign	CTR (click / impression)	Ad to website (page view / click)	Impression to website	Page view to tour request	Cost per request
UGC video	6.5% (5.3%–7.9%)	93%	6.0%	0.0% (0.0%–4.2%)	–
Maximus video	5.3% (4.3%–6.6%)	99%	5.3%	0.0% (0.0%–4.4%)	–
All campaigns	5.9% (5.1%–6.8%)	96%	5.6%	0.0% (0.0%–2.2%)	–

Ranges in brackets are 95% confidence intervals; with few page views the true request rate could be anywhere in that range.

Scorecard

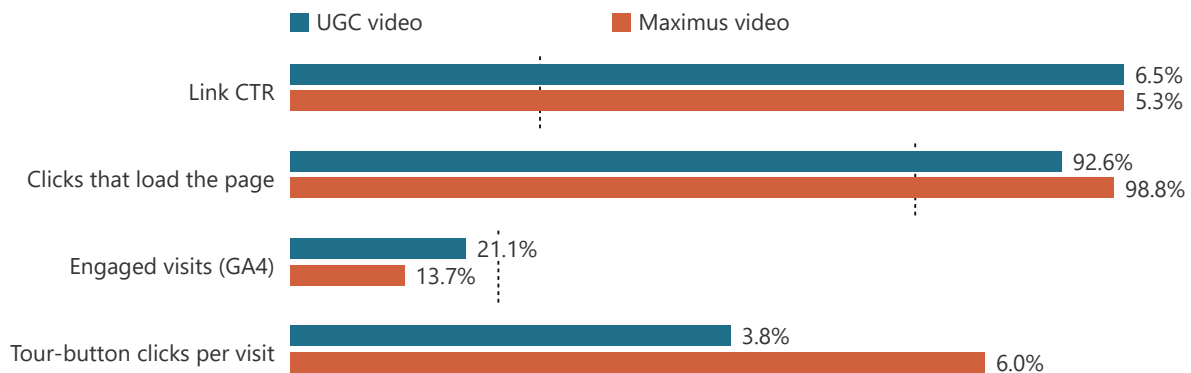

Metric	UGC video	Maximus video	All campaigns
Status	Traffic strong, leads too early	Traffic strong, leads too early	
Spend	\$6.31	\$6.34	\$12.65
Impressions	1,448	1,593	3,041
Reach (approx.)	1,377	1,445	2,822
Frequency	1.05	1.10	1.08
Link clicks	94	85	179
CTR	6.5%	5.3%	5.9%
Cost per click	\$0.07	\$0.07	\$0.07

Budget used	78%	78%	–

Funnel by campaign: from impression to tour request

Bar length uses a log scale so later stages stay visible; labels show exact counts.

Key rates by campaign

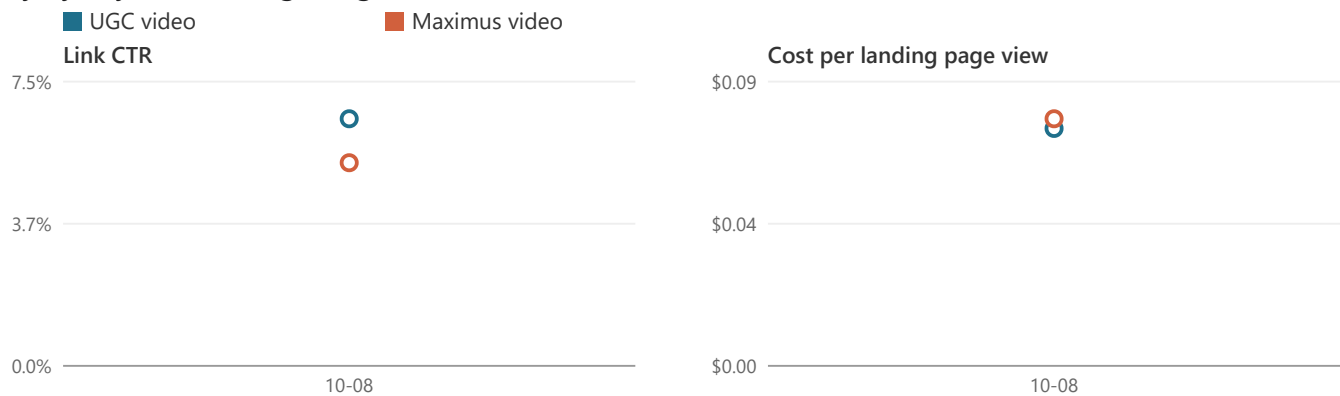

Dashed line: benchmark (good CTR; minimum healthy page-load and engagement rates).

Day over day

Is each ad getting better? Complete days are compared with complete days in the ad account time zone, and today with yesterday up to the same hour. One campaign gets only tens of page views a day, so each change is tested; moves inside the daily noise band are labelled as such.

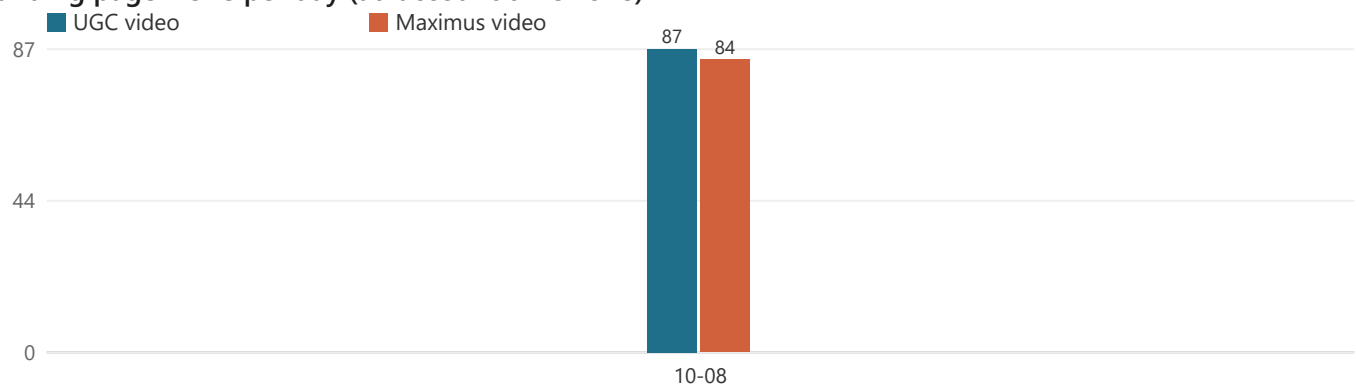

0 complete days of delivery so far; the ads started today: tomorrow compares today with yesterday up to the same hour, and full days are compared from the day after.

Day by day: is each ad getting better?

Hollow point and dashed segment: today so far (partial day). Days in the ad account time zone.

Landing page views per day (ad account time zone)

Campaign	Day	Spend	Impressions	Clicks	CTR	Page views	Cost / page view	CPM	Clicks → page	US share of spend	Requests
UGC video	Oct 8 (today, so far)	\$6.31	1,448	94	6.5%	87	\$0.07	\$4.36	93%	9%	0
Maximus video	Oct 8 (today, so far)	\$6.34	1,593	85	5.3%	84	\$0.08	\$3.98	99%	7%	0
All campaigns	Oct 8 (today, so far)	\$12.65	3,041	179	5.9%	171	\$0.07	\$4.16	96%	8%	0

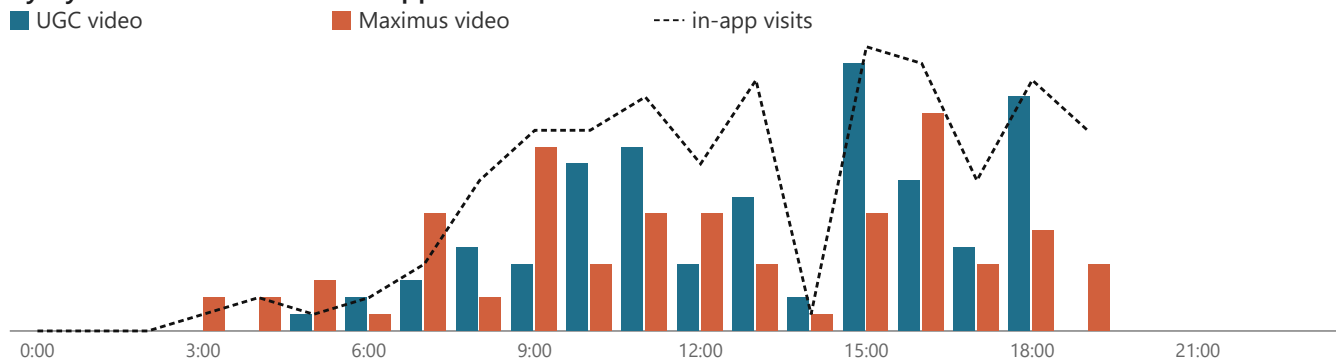

Website by day (Facebook and Instagram in-app visits, all campaigns together)

Day	Visits	Scrolled past the first screen	Reached or opened the form	Played the film	Sent a request
Oct 8 (today, so far)	152	55% (84)	13% (20)	3	1

"Sent a request" counts every form sent from a Facebook or Instagram in-app visit; the Requests column above counts only stored requests that carry a campaign's ad tags, so it can be lower.

GA4 is not compared day by day: it assigns campaign names to sessions 24–48 hours late, so the most recent days would look worse than they are.

Today by hour: link clicks and in-app visits

Link clicks per hour today (ad account time zone). Max 17.

What works

- **Maximus video beats UGC video on clicks that load the page.** 98.8% vs 92.6% (two-proportion z-test $p = 0.043$).
- **Compliance: every campaign declares the Housing special ad category.** UGC video: Housing (United States, Canada and Japan); Maximus video: Housing (United States, Canada and Japan).
- **UGC video** gets a strong link CTR of 6.5% (benchmark 1.5%).
- **UGC video:** 93% of clicks load the page, so the site loads fast in the in-app browser.
- **Maximus video** gets a strong link CTR of 5.3% (benchmark 1.5%).
- **Maximus video:** 99% of clicks load the page, so the site loads fast in the in-app browser.

What does not work, and why

- **UGC video: only 9% of spend reached US.** CA 78% of spend, CPM \$4.50, CTR 5.8%; JP 13% of spend, CPM \$2.95, CTR 6.5%; US 9% of spend, CPM \$9.55, CTR 21.7%. Why: Meta buys the cheapest landing page views, and impressions in the priority market cost more (see CPM), so most of the budget goes elsewhere.
- **Maximus video: only 7% of spend reached US.** CA 74% of spend, CPM \$3.95, CTR 4.6%; JP 19% of spend, CPM \$3.40, CTR 6.7%; US 7% of spend, CPM \$8.96, CTR 12.0%. Why: Meta buys the cheapest landing page views, and impressions in the priority market cost more (see CPM), so most of the budget goes elsewhere.
- **The A/B test arms will not have the same budget on 2 test days.** Oct 9: UGC video \$10.00 vs Maximus video \$15.00; Oct 10: UGC video \$10.00 vs Maximus video \$15.00 (scheduled: Maximus video \$15.00/day for Oct 9 – Oct 10). Why: With a larger budget one arm buys more, and more expensive, impressions, so the comparison is no longer like for like; a 50% budget jump can also restart the learning phase.
- **45% of Facebook/Instagram visitors leave before reaching the gallery.** 68 of 152 in-app visits never loaded an image below the first screen; 84 scrolled on (gallery 26, film 31, levels 17, map 10). Why: In the in-app browser people decide in a second or two; if the first screen does not continue what the video showed (the view, the price, the place), they close it.
- **11 ad visitors started the tour form, 0 sent it.** form starts (GA4): UGC video 5, Maximus video 4; 20 in-app visitors reached or opened the form and 1 sent it (without ad tags) (website); if 30% of starters normally finish, 0 of 11 has a 2% chance. Why: Starting but not sending points at the form itself: five required fields (name, phone, email, date, time) and date pickers are a lot on a phone.
- **Use dynamic UTM values so every new ad is tracked automatically.** AmauRd-UGC-test1: utm_campaign=kaloли_ugc_personal_test01; AmauRd-MaximusVideo: utm_campaign=kaloли_Maximus_personal_test01. Why: Hand-typed values must be re-typed for every new ad, and two ads sharing one value cannot be told apart in GA4.
- **The A/B test picks its winner on "Cost per post engagement".** Test in progress (Oct 8, 2026, 12:00 AM – Oct 14, 2026, 12:00 AM); A Hawaii House Sale: \$0.03, B Test - Hawaii House Sale: \$0.02. Why: Post engagement rewards the video people like or replay, not the one that sends buyers to the site.
- **The A/B test runs 6 days, under Meta's 7-day minimum.** Test schedule Oct 8, 2026, 12:00 AM – Oct 14, 2026, 12:00 AM; Test in progress. Why: Tests shorter than 7 days miss weekday/weekend differences and often end without a confident winner.

Context

- **Campaigns optimise for landing page views, not tour requests.** Objective Traffic: UGC video, Maximus video; ad sets: Highest volume Landing Page Views. Meta finds people who load pages cheaply; it does not learn who requests tours.
- **UGC video: 13% of today's spend went to JP before it was removed.** JP \$0.82 (18 clicks) (today's figures include the hours before the change logged at Oct 8, 1:35 PM PDT; confirm in tomorrow's report). Meta reports countries per day, so spend from before the change is still in today's numbers.

- **UGC video: 0 tour requests so far is still normal.** If 0.50% of visitors requested a tour, 0 requests from 87 page views has a 65% chance; about 598 page views are needed before zero becomes meaningful. Tour requests for a single listing are rare; at this volume zero is expected.
- **Maximus video: 19% of today's spend went to JP before it was removed.** JP \$1.22 (24 clicks) (today's figures include the hours before the change logged at Oct 8, 1:35 PM PDT; confirm in tomorrow's report). Meta reports countries per day, so spend from before the change is still in today's numbers.
- **Maximus video: 0 tour requests so far is still normal.** If 0.50% of visitors requested a tour, 0 requests from 84 page views has a 66% chance; about 598 page views are needed before zero becomes meaningful. Tour requests for a single listing are rare; at this volume zero is expected.
- **Part of the GA4 data is split between campaigns by estimate.** kaloli_ugc_personal_test01: 46 sessions split UGC video 65% / Maximus video 35%. Both ads sent the same utm_campaign for a while, so GA4 cannot tell them apart; the split follows each ad's landing page views.
- **54% of ad sessions are not yet attributed to a campaign in GA4.** 75 sessions show as "(cross-network)" with 0% engaged. GA4 assigns campaign names to recent sessions within 24–48 hours. Sessions that stay unattributed with no engagement are usually automated (ad review, link previews).
- **GA4 campaign values that match no Meta campaign.** kaloli_ugc_personal1 (2 sessions). An old or mistyped utm_campaign value; these visits are counted in the total but not in any campaign.

Since the last report

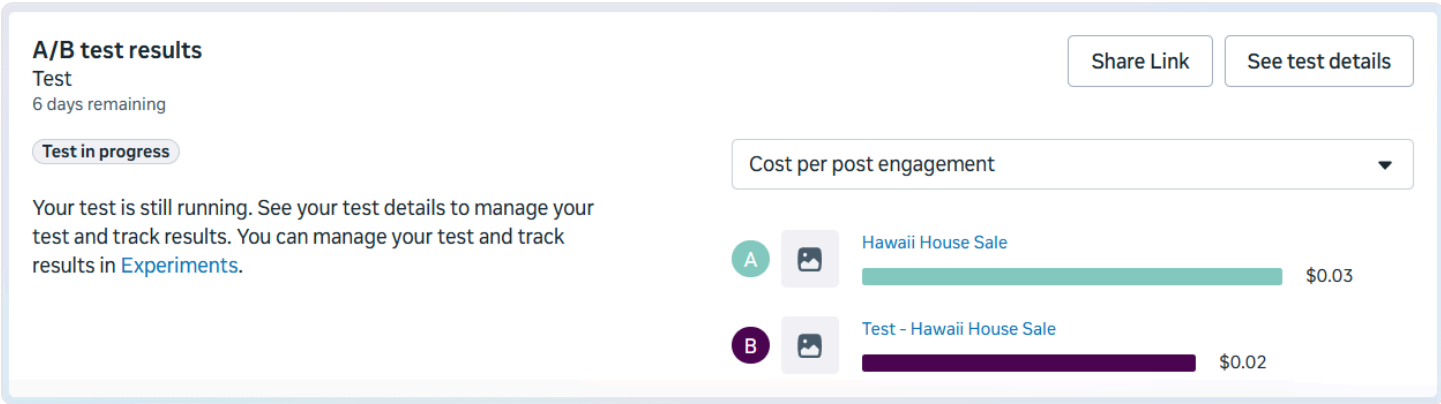

Compared with the run at Oct 8, 7:11 PM PDT (same window start).

Change	UGC video	Maximus video	Total
Spend	+\$0.16	+\$0.28	+\$0.44
Impressions	+25	+51	+76
Link clicks	±0	+5	+5
Landing page views	+3	+5	+8
GA4 sessions	±0	±0	+3
Engaged	±0	±0	±0
Tour-button clicks	±0	±0	±0
Tour requests	±0	±0	±0

Meta Ads Manager charts

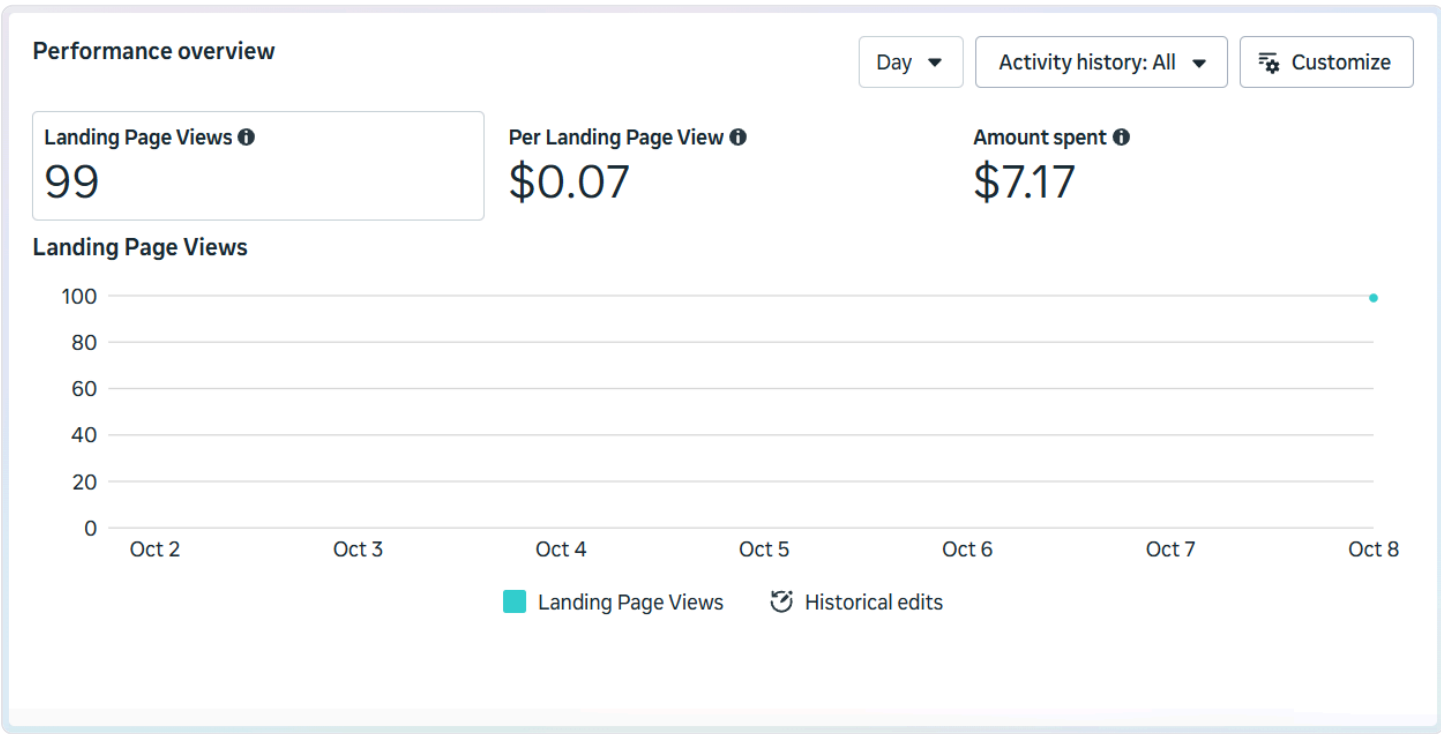

Meta's own charts from each campaign's insights page in Ads Manager, data Oct 2, 2026 to Oct 8, 2026, captured Oct 8, 9:06 PM PDT. Meta counts results by its own attribution, so small differences from the tables above are expected.

Meta export "region" covers the requested dates	PASS	requested 2026-10-02 ... 2026-10-08; file says 2026-10-02 ... 2026-10-08
Meta export "age-gender" covers the requested dates	PASS	requested 2026-10-02 ... 2026-10-08; file says 2026-10-02 ... 2026-10-08
Meta export "platform" covers the requested dates	PASS	requested 2026-10-02 ... 2026-10-08; file says 2026-10-02 ... 2026-10-08
UGC video: daily totals match the country breakdown	PASS	impressions 1,448 vs 1,448; clicks 94 vs 95; spend \$6.31 vs \$6.39; the country export was taken after the daily one while the ads were delivering, so it includes slightly more
UGC video: funnel stages are in order	PASS	impressions ≥ clicks ≥ page views; form starts ≥ submissions

Check	Result	Detail
Maximus video: daily totals match the country breakdown	PASS	impressions 1,593 vs 1,593; clicks 85 vs 85; spend \$6.34 vs \$6.34
Maximus video: funnel stages are in order	PASS	impressions ≥ clicks ≥ page views; form starts ≥ submissions
GA4 event tables agree on total sessions	PASS	cta 270, formStarts 270, submitted 270, gallery 270, film 270, agentContact 270
GA4 campaign rows add up to the table total	INFO	320 in rows vs 270 de-duplicated total: GA4 counts some sessions under more than one campaign value
All GA4 rows were read	PASS	no table was cut off
GA4 submission events agree with stored requests	PASS	GA4 7 submission events; database 8 requests (2 real, 6 test)
Website in-app visits are in line with Meta page views	PASS	152 Facebook/Instagram in-app visits vs 171 Meta landing page views (89%); in-app visits are a lower bound because some ad clicks open in other browsers.
Every ad campaign and UTM value is mapped	PASS	2 unmapped GA4 sessions; 0 Meta campaigns missing from config
Day boundaries differ by source	INFO	Meta and the website use America/Los_Angeles; GA4 uses Pacific/Honolulu. Daily figures can differ at the edges; window totals are comparable.

Changes and tests

- Oct 8, 12:00 AM PDT: Both ads start delivering (A/B test, Traffic objective optimised for landing page views, \$10/day each)
- Oct 8, 1:35 PM PDT: Japan removed from locations; Maximus ad retagged utm_campaign=kaloli_Maximus_personal_test01
- Oct 9, 12:00 AM PDT: Maximus video: scheduled daily budget \$15.00 for Oct 9 – Oct 10 (Ads Manager budget scheduling) (scheduled)
- A/B test: Test in progress; key metric Cost per post engagement; Oct 8, 2026, 12:00 AM – Oct 14, 2026, 12:00 AM; A Hawaii House Sale \$0.03, B Test - Hawaii House Sale \$0.02

Definitions

- CTR = link clicks / impressions. Ad to website = landing page views / link clicks (Meta pixel). Page view to tour request = stored tour requests attributed to the campaign / landing page views.
- Engaged session (GA4) = 10+ seconds, 2+ page views or a key event. GA4 sessions are matched to campaigns by utm_campaign; "(est.)" marks a split by landing page views where two ads shared one value.
- Tour requests come from the website database (test requests excluded), not from the pixel.
- Status has two parts. Traffic: strong (CTR at or above the good benchmark and at least 85% of clicks load the page), typical, weak (CTR below the poor benchmark or under 75% of clicks load) or too early (under 500 impressions). Leads: converting (has requests), not converting (zero requests is statistically unlikely) or too early.
